Main content

Admin Allows the Uber Admin to add standard intents and train turn-key standard models to be used by customers for bots.
These menus are only accessible to Uber Admins

These options allow customers to add/Edit "custom" intents.
Using these custom intents they can re-train models.
When training, the standard intents AND the custom intents will be used.

Once the Intents are ready, the customer can create Bot(s) in draft state using "**Create Bot**".
Using **Launch Bot** the customer can associate models and launch the bot on AWS.
Using **Test Bot** the customer can test the bot with inline chat client.
